From Barren to Bountiful: A Call to Journalists to Spotlight the Oasis Cone Climate Solution

Carbon Blue Solutions Limited LLC has developed the Oasis Cone, a breakthrough in environmental design that enables mangroves and salt-tolerant crops to grow in desert regions without the need for irrigation, freshwater, or pumps.

This patent-pending system uses a passive, soil-integrated structure to guide seedling roots toward naturally occurring subsurface saline water tables, while protecting young plants from desert heat and salt shock. The technology has been developed with input from international experts, including contributors affiliated with government-backed and UN-recognized scientific initiatives in arid land ecology and sustainable agriculture.

A Practical Tool for Desert Resilience

- No artificial irrigation or infrastructure required
- Designed for high-salinity environments and extreme heat
- Compatible with mangrove afforestation, halophyte agriculture, and land restoration

- Flat-pack, low-cost construction for large-scale field deployment
- Enables afforestation in regions previously considered unplantable

Why Now?

Desertification is accelerating, freshwater is scarce, and many regions face rising food insecurity and rural unemployment. Yet current afforestation efforts are often expensive, water-intensive, or geographically limited.

The Oasis Cone offers a viable solution for:

- Carbon sequestration in non-arable zones
- Nutrient-rich saline agriculture
- Job creation in areas suffering from agricultural decline
- Land regeneration without freshwater or energy input

With over one-third of the planet's land surface classified as arid, the opportunity for scalable environmental and economic impact is vast - but it requires urgent visibility and support.

A Call to Journalists: Help Us Bring This to Life

Carbon Blue Solutions is currently preparing pilot trials in selected desert zones and invites journalists, editors, and environmental correspondents to help amplify this initiative.

Opportunities include:

- Interviews with the project development team
- Access to technical documents, visuals, and scientific summaries
- Feature stories on scalable, water-independent afforestation

- Reporting on pragmatic tools for climate resilience in arid regions

About Carbon Blue Solutions

Carbon Blue Solutions Limited LLC develops scalable environmental technologies for restoring degraded land and enabling carbon capture in extreme climates. Its flagship innovation, the Oasis Cone, is offered through a licensing model for governments, NGOs, and climate-aligned institutions seeking field-ready solutions for desert greening and blue carbon development.
